Datasheet — Spanish Academic-Integrity Scenarios Annotated for Virtues (planned, v0.1)

Deliverable 07 · Research Methods and Scientific Integrity in AI · UNMSM 2026-II · Deisy Lizbeth Acosta Ticse Framework: Gebru et al. (2021), *Datasheets for Datasets*, Communications of the ACM, 64(12), 86–92. https://doi.org/10.1145/3458723

Dataset status: PLANNED — NOT YET COLLECTED. Each element is labelled **Defined** (decision taken), **Planned** (designed, not executed), or **UNKNOWN** (depends on approvals or data not yet available), with the action required before collection.

Scope: this datasheet covers the annotated scenario corpus (thesis artifact 1). Conversation logs produced in the evaluation are a separate dataset and will have their own datasheet.

1. Motivation

Element	Documentation	Status	Action before collection
Purpose	Provide a Spanish-language resource of academic-integrity scenarios involving generative AI, annotated for the four cardinal virtues (prudence, justice, fortitude, temperance) plus academic honesty, to inform the design and evaluation of a reflective scaffolding agent	Defined	—
Gap addressed	Existing moral-judgment resources (e.g., ETHICS; Hendrycks et al., 2021) are in English, crowd-annotated without a unified philosophical framework, and outside the academic-integrity domain	Defined	Re-check against the Deliverable 04 review

Element	Documentation	Status	Action before collection
Creators	Doctoral researcher (UNMSM, DSR thesis)	Defined	—
Funding	Self-funded; external calls to be assessed	UNKNOWN	Confirm before collection

2. Composition

Element	Documentation	Status	Action before collection
Instance	One written scenario in which a university student faces a decision about delegating academic work to generative AI	Defined	Freeze the scenario template
Labels	Per scenario and per virtue: relevance and enacted/violated judgment, anchored in expert-validated exemplar cases (not rule-based definitions)	Planned	Write the annotation guide with exemplars
Number of instances	—	UNKNOWN	Set by pilot agreement and annotation budget
Scenario source	Both: scenarios written by experts and scenarios adapted from documented cases	Defined	Remove identifiers from adapted cases; record origin of each scenario
Personal data	Scenarios are not intended to contain personal data	Planned	Screening step to remove identifiers if real cases are adapted
Language	Spanish (Peruvian university context)	Defined	—
Splits	—	UNKNOWN	Define after size is known; split by scenario to avoid leakage

3. Collection process

Element	Documentation	Status	Action before collection
Validation	Content validity of virtue definitions and scenarios by expert judgment (formative, artificial FEDS episode; Venable et al., 2016)	Planned	Recruit experts; define validity index
Annotators	Trained annotators; number not yet fixed	UNKNOWN	Recruit and train; record annotator profiles
Timeframe	Thesis plan: corpus construction 2027-I to 2027-II	Planned	Confirm after ethics approval
Ethics	Approval by an institutional research ethics committee before any collection	Planned	Submit protocol

4. Preprocessing / annotation

Element	Documentation	Status	Action before collection
Agreement	Krippendorff's alpha **reported per virtue, not aggregated** (Hayes & Krippendorff, 2007)	Defined	Set acceptance threshold in the guide
Pilot	Pilot annotation round before full annotation	Planned	Run and revise guide
Raw data kept	Raw annotations kept alongside adjudicated labels	Planned	Define storage format and versioning

5. Uses

Element	Documentation	Status
Intended	Designing and evaluating the reflective scaffolding agent; research on virtue-based annotation	Defined

Element	Documentation	Status
Not intended	Grading students; detecting misconduct; profiling individuals' moral character	Defined
Known risk	Operationalising prudence may drift towards a rulebook, the restrictive logic the thesis questions; mitigated by exemplar anchoring and per-virtue reporting	Defined

6. Distribution

Element	Documentation	Status	Action before collection
Release	Open release of the corpus and annotation guide **if ethics approval permits**	Planned	Align with consent and approval
Licence	—	UNKNOWN	Choose licence before release

7. Maintenance

Element	Documentation	Status
Maintainer	Doctoral researcher	Defined
Versioning	Semantic versions of corpus, guide and agreement report	Planned
Error reporting	Issue tracker in the project repository	Planned
