PRISMA 2020 flow diagram for new systematic reviews which included searches of databases and registers only

*Consider, if feasible to do so, reporting the number of records identified from each database or register searched (rather than the total number across all databases/registers).

**If automation tools were used, indicate how many records were excluded by a human and how many were excluded by automation tools.

Automation tool: AI-assisted title/abstract first pass (Claude, Anthropic); criteria frozen after two blind pilots. Blind human verification of 116 records: 96.6% agreement; 1 of 45 sampled exclusions rescued (2.2%).

***Rapid review with a cap of 10 studies under a pre-specified prioritisation rule. Search: Semantic Scholar, 24 Oct 2026. Phases 1–4 per course brief (eligibility, 3, sits within Screening in this template). Check: 617−2=615; 615−507=108; 108−11−75=22; 22−12=10.
