
** Automation tool: AI-assisted first-pass screening (Claude, Anthropic) with a rubric frozen after two blind pilots (n = 50, binary κ = 0.48; n = 20, κ = 0.64).
Blind human verification of 116 records (all records passed by the tool + random 10% of its exclusions): agreement 96.6%, κ = 0.93;
1 of 45 sampled exclusions rescued (2.2%). Rapid review (Cochrane RRMG guidance); one human reviewer. Phases numbered 1–4 per course brief;
in the PRISMA 2020 template, eligibility is reported within Screening.
Arithmetic check: 617 − 2 = 615; 615 − 507 = 108; 108 − 11 − 75 = 22; 22 − 12 = 10.
